Metal furniture is steadily growing in popularity. It is popping up in project specifications and contract design trade publications. But why? It turns out there are several valid reasons why metal furniture is increasing in popularity for group living environments.

Here are the top three:

**IT IS DURABLE.** Both wood and metal furniture have had their place in the history of furniture design. Both offer durability and can stand the test of time. But, metal is showing its might as a work horse of the contract furniture market. Metal furniture is relatively lightweight but has a practically impenetrable surface. Metal surfaces can show ink marks or scratches so some facilities prefer laminate tops on metal case goods to provide a more scratch and dent resistant top. Metal finishes can be spot repaired so over time surfaces can be preserved to look pristine even when used heavily.

**IT IS EASY TO CLEAN.** When heavy cleaning agents or pesticide treatments are a must, metal furniture surfaces can be less absorbent than wood surfaces allowing for less harmful residues. In some facilities that have to face bed bugs or other pests, metal is an easy surface to treat and clean of pesticides. While there is no evidence that metal is less attractive than wood to bed bugs and other pests, there can be fewer hiding places in soldered metal joints. But, a hiding place is a hiding place and bed bugs or other tiny pests will not discriminate and can find dark, cozy hiding spots in any piece of furniture – wood or metal. Caulking and other sealants are effective ways to seal seams and joints in any piece of furniture that will help deter pest nesting.

**IT IS ATTRACTIVE.** Metal furniture can be basic like metal beds and case goods, but metal can also be highly re-configurable and gives rise to endless possibilities for space planning. For example, metal loft beds can be positioned at heights that can accommodate storage and work areas underneath. As needs change, the bed and accessories can be reconfigured to lower or higher points to meet current residents’ needs. Additionally, metal can be finished in a variety of colors from natural colors to bold, primary colors. Metal finishes can be customized to easily match an overall color-scheme and can match team or community color preferences. Chrome finishes used in mixed material designs in upholstered seating and dining or occasional tables provide high-end looks and will stand the test of time.
Metal Beds

440293 Metal Bunkbed, Demountable. 18-Gauge Steel Frame, Sinous Wire Mattress Foundation, Center Supports. Coffee Brown (shown) or Black Baked Enamel Finish.

440923 w/ Laminate Inserts Metal Bunkbed, Demountable. Shown with Optional Woodgrain Laminate Inserts (36” Insert 440027 or 39” 44028). Coffee Brown (shown) or Black Baked Enamel Finish.

The Mattress Buyer’s Survival Guide  Part I of III
From The Group Living Furniture Blog

When sleeping large numbers of residents or campers, providing mattresses is a necessity.

One glance at Google and it is quick to see that the world of contract / commercial mattresses is complex and pricey. With prices ranging from about $25 all the way up to $200 for each mattress, how do you choose the right mattress for your facility?

Buying commercial mattresses is typically a budget-stretching process since facilities need hundreds of mattresses at a time to accommodate all of their campers, residents and staff. In Part I of this three-part blog series we will focus on mattress cores.

Think of choosing mattresses like picking a sandwich off a restaurant menu. Sandwiches are universally built of bread, meat and fixins’. The most important components are core and cover - or the bread and meat in our analogy. Let’s start with the meat (the mattress core):

Cores come in a variety of materials. The most popular are foam and fiber with or without innersprings.

Most foam is a polyurethane product which means that it is a byproduct of petroleum. The upside of foam is that it familiar in both residential and commercial settings and almost everyone has had an experience with foam either in a mattress, sofa cushion, car seat, etc.

Foam cores have varying densities. Understanding the importance of density as it relates to foam durability is a dizzying topic. All foam mattresses soften over time. General consensus is that the higher the density the longer the life span of the foam. Most commercial mattress foams range in densities from 1.0 to 1.8. There is a lack of consistency in these ratings from manufacturer to manufacturer so while the concept is valid the margin for error in density classifications makes this a tricky criterion in mattress purchasing. Want the nitty-gritty scientific explanation? Here is an interesting place to start from the Polyurethane Foam Association.

Fiber cores are primarily recycled content. A large component in fiber cores are recycled plastic milk and water bottles. Fibers are “densified” and molded in differing depths, then cut to appropriate dimensions. Due to the recycled nature of the poly fibers these cores are less expensive than foam cores.

Commercial fiber and foam cores come in standard depths ranging from 2” to 6”. The deeper the mattress, the higher the comfort and the higher the cost. Shorter depths maybe be suitable for very young, light weight sleepers but heavier sleepers will likely not be comfortable on short depth mattresses. It’s a princess and pea relationship – the more someone weighs the more compression they put on the mattress and the more they can feel the hard component of the bed they are sleeping on.

Innersprings add comfort but are more expensive due to the production and assembly of the metal springs. Also, the springs make mattress weigh more making shipping more costly than foam and fiber cores. Few camps or dorms use innersprings strictly due to the economy of the matter. However, adults tend to prefer innerspring comfort so some facilities provide innerspring for adult sleepers and foam or fiber for children.

As you can see, there is way more to mattresses than meets the eye. While bottom-line price is important, not all mattresses can be compared in an apples to apples way. It is important to work with a contract mattress and furniture supplier that understands the needs of your facility and the people sleeping there so that you get the right mattress.

The 5 Benefits of Metal Furniture
From The Group Living Furniture Blog

Metal furniture has recently become an interesting topic in facility planning and design.

Once considered too utilitarian in style, contract metal furniture has developed a fresh surge in popularity for a variety of reasons including durability and cleanability. While wood furniture will always remain a popular option, here are the top five reasons to consider metal furniture for your group living, healthcare or camp environments:

1. **Believe it or not, it has great style!** Metal furniture manufacturers have worked hard to create furniture that combines both form and function. Natural colors that are reminiscent of wood and laminate drawer faces can transform a basic piece of metal furniture into something indistinguishable from wood furniture aesthetically.

2. **Cleanability and pest management.** There is overwhelming scientific evidence that metal furniture does not deter bed bugs any better than wood furniture, but metal furniture does allow easier clean up and tolerates pest fighting chemicals better than wood due to its less absorbent surface. Metal furniture has bends, folds and board areas that still offer pests like bed bugs a place to hide so it is by no means bed bug or pest proof but with proper inspection and maintenance metal furniture can be a useful component of a pest management plan.

3. **It’s got spirit & style!** While most metal furniture is designed to mimic or blend in with wood furniture, metal can also be a great statement as part of a team or school spirit color design. Standard primary color options or custom match paints are easy to achieve on metal furniture since metal does not have the variations and graining of wood. Painted metal surfaces are consistently easy to standardize in for any color scheme.

4. **Extreme durability.** Metal furniture is a work horse of the contract furniture market. Metal furniture can tolerate extreme use which makes it perfect for any group living environment – especially dormitory and transient housing applications. Metal beds and bunk beds are durable and cleanable. Metal case pieces can include underbed storage, night stands, and chests of drawers. Metal’s finishes are well-sealed so with proper care metal beds and case pieces can withstand punctures, drink rings and general heavy use. What’s more, if the finish ever gets damaged do-it-yourself patch kits can create a like-new look in very little time.

5. **It’s affordable.** While good-quality metal furniture might have a higher sticker price than wood equivalents, you can expect metal furniture to last 10 – 15 years or longer. Many metal furniture collections have warranties that will cover normal use for ten years or more. Metal furniture may require a larger up-front investment but the replacement cycle is less frequent.

Baron Series
Two table surfaces offer a whole new level of versatility for diverse environments.

Nadia Series:
The combination of a metal base & wood or laminate top helps it fit in a traditional to contemporary setting.
*Special Base Sizes—By nature of it’s design, this table base is highly customizable for unusual size tables, special applications and projects with extraordinary strength concerns.
Ultimate Guide to Durable Outdoor Furniture.
From The Group Living Furniture Blog

Find Out How to Make the Most of Your Outdoor Spaces!
The right furniture can change even the most modest outdoor space from a plain green space to an outdoor therapy room, classroom or dining room.

Transforming outdoor spaces into an extension of indoor functions is not just a great way to make the most of all your facility's space, it is also proven that being outdoors “reduces stress, improves health outcomes, supports pain management and promotes a sense of overall well-being among patients, visitors and staff.”
So how do you make the most of your outdoor spaces?

Here is the ultimate guide to durable outdoor furniture:

Use COLOR. Adirondack styles of furniture can be finished in a wide variety of colors. Made of pressure treated solid pine from renewable resources, chairs and tables boast a limited lifetime warrantee against rot, insect infestation and water damage. Adirondack styles are eco-friendly, charming and comfortable. Consumers will find it easy to enjoy long stretches of outdoor time nested in Adirondack-style seating.

Make it PERSONAL or inspirational. Metal outdoor benches and seating can be easily customized with a logo or favorite inspirational quote or saying. These solid steel seating options with durable thermoplastic coatings are great tools to encourage consumers and guests to just sit down and take in the sights and sounds of nature. Benches can easily be surface or ground mounted along walking paths or sidewalks. Fully weather-proof and corrosion-proof, metal options retain their color and form for decades with no maintenance.

Be GREEN. Recycled plastic plank seating has the look of natural wood but never needs staining or refinishing. The planks are durable and weather-proof with wood detailing that mimics wood plank benches. The natural coloring of the planks blends perfectly in any outdoor space to create a soft, natural look without ever needing maintenance.

Make it DINING READY. Even if you have a short warm season, outdoor tables and chairs draw people outside to enjoy snacks and meals that lead to productive dialogue. There is something satisfying and rewarding about dining outside. Even if your space is small, an appropriately sized table with seating will be used and appreciated. Options include metal with attached bench seating (including ADA Compliant configurations), wood with bench seating or chairs, or portable molded plastic and polyurethane tables with folding seats.

Make it COZY. Organizing a small group therapy session or meeting in a vast outdoor space can be made easier with a well-planned furniture arrangement. Think of it like an outdoor living room – orient pieces towards a focal point like a fireplace, flower garden, planter, etc. to create an area that encourages group dynamics and allows for easy conversation. Adirondack occasional tables and sofas and chairs with cushions are the best options for creating outdoor living rooms where consumers and staff feel safe, comfortable and at ease with their natural surroundings.

Remember that when furnishing an outdoor space, buying contract outdoor furniture is the best way to ensure you buy pieces that are constructed to commercial standards. You will have peace of mind that your furniture will have the right construction standards, warranties and durability to last over time.
